Subject: **Salina Municipal Solid Waste Landfill Facility**
2024 Annual NMOC Emission Rate Report
Source ID No. 1690059

To Whom It May Concern:

On behalf of the City of Salina, Kansas, and the Salina Municipal Solid Waste Landfill (Salina Landfill), SCS Engineers (SCS) is submitting the 2024 Annual Non-methane Organic Compound (NMOC) Emission Rate Report for the Salina Landfill. Because the Salina Landfill is subject to the Federal Implementation Plan 40 CFR 62.16724(c), the facility is required to calculate and submit its NMOC emission rate annually based on actual waste acceptance until an active gas collection system is required and installed to comply with 40 CFR 62 Subpart 000.

The annual NMOC emissions from the landfill are calculated using the LandGEM model version 3.02. The model combines site-specific NMOC concentrations from previous Tier 2 testing along with actual in-place waste data to calculate the total NMOC emissions for the year. The 2024 calculations used the following data:

- Actual 2024 waste acceptance: 84,491 megagrams (Mg)
- Total waste in place: 3,546,254 Mg
- Site-Specific NMOC concentration: 207 ppmv as Hexane (April 2021 Tier 2)

The resulting NMOC emission rate for the calendar year 2024 was calculated to be 18.32 Mg/year. A copy of the LandGEM model output is attached to this letter. This emission rate remains below the 34 Mg/year threshold for installing an active gas extraction system under Subpart 000.

March 11, 2025

Attachment: LandGEM Model Output

Summary Report

Landfill Name or Identifier: Salina Municipal Solid Waste Landfill

Date: Monday, March 10, 2025

Description/Comments:

About LandGEM:

First-Order Decomposition Rate Equation:

$$Q_{CH_4} = \sum_{i=1}^n \sum_{j=0.1}^1 k L_o \left(\frac{M_i}{10} \right) e^{-k t_{ij}}$$

Where,

Q_{CH_4} = annual methane generation in the year of the calculation ($m^3/year$)

i = 1-year time increment

n = (year of the calculation) - (initial year of waste acceptance)

j = 0.1-year time increment

k = methane generation rate ($year^{-1}$)

L_o = potential methane generation capacity (m^3/Mg)

M_i = mass of waste accepted in the i^{th} year (Mg)

t_{ij} = age of the j^{th} section of waste mass M_i accepted in the i^{th} year (*decimal years*, e.g., 3.2 years)

LandGEM is based on a first-order decomposition rate equation for quantifying emissions from the decomposition of landfilled waste in municipal solid waste (MSW) landfills. The software provides a relatively simple approach to estimating landfill gas emissions. Model defaults are based on empirical data from U.S. landfills. Field test data can also be used in place of model defaults when available. Further guidance on EPA test methods, Clean Air Act (CAA) regulations, and other guidance regarding landfill gas emissions and control technology requirements can be found at <http://www.epa.gov/ttnatw01/landfill/landflpg.html>.

LandGEM is considered a screening tool — the better the input data, the better the estimates. Often, there are limitations with the available data regarding waste quantity and composition, variation in design and operating practices over time, and changes occurring over time that impact the emissions potential. Changes to landfill operation, such as operating under wet conditions through leachate recirculation or other liquid additions, will result in generating more gas at a faster rate. Defaults for estimating emissions for this type of operation are being developed to include in LandGEM along with defaults for conventional landfills (no leachate or liquid additions) for developing emission inventories and determining CAA applicability. Refer to the Web site identified above for future updates.

Input Review

LANDFILL CHARACTERISTICS

Landfill Open Year	1977	
Landfill Closure Year (with 80-year limit)	2056	Landfill Closure Year entered exceeds the 80-year waste acceptance limit. See Section 2.6 of the User's Manual.
Actual Closure Year (without limit)	2200	
Have Model Calculate Closure Year?	No	
Waste Design Capacity	16,013,644	megagrams

MODEL PARAMETERS

Methane Generation Rate, k	0.050	year ⁻¹
Potential Methane Generation Capacity, L ₀	170	m ³ /Mg
NMOC Concentration	207	ppmv as hexane
Methane Content	50	% by volume

GASES / POLLUTANTS SELECTED

Gas / Pollutant #1:	Total landfill gas
Gas / Pollutant #2:	Methane
Gas / Pollutant #3:	Carbon dioxide
Gas / Pollutant #4:	NMOC
