1.0 EXECUTIVE SUMMARY

On March 31st – April 3rd, 2025, the Stack Test Group, LLC performed opacity observations at the BUNGE facility located in Emporia, KS. Observation H viewpoints had to be re-tested on May 14th due to a production issue from the previous testing. Testing was conducted on 48 various sources. BUNGE personal performed visual inspections on all the sources to make sure it was in proper working condition before testing was conducted. Three opacity observations lasting one-hour in duration were conducted on each source. Testing was conducted while BUNGE personal ran equipment at a normal rate. Presented below are the results of this test.

All 48 Sources had the same results when comparing the highest 6 minute average for opacity. 3 – 1 hour runs were completed on each source.

All 48 Sources Tested

Opacity (Highest 6 Minute Average): 0.0 Percent

2.0 INTRODUCTION

The Stack Test Group, LLC conducted opacity observations on various sources and conveyers at the Bunge facility located in Emporia, KS.

Testing was conducted by Mr. Ryan Schueller and Mr. Chad Zaputil of the Stack Test Group, LLC, and coordinated by Mr. RJ Schratz, Corporate Environmental Manager and Vince Breedlove HSE Manager at the Bunge – Emporia location.

The testing was not witnessed by a KDHE representative, also there were no known operational discrepancies while the testing was conducted.

Opacity testing followed the guidelines of U.S. EPA Reference Method 9. Three tests were conducted on each source. Testing was conducted while Bunge personal operated the equipment at a normal rate.

3.0 SAMPLING AND ANALYTICAL PROCEDURES

3.1 Opacity

Opacity emissions were determined following the guidelines of U.S. EPA Reference Method 9. This method is titled:

Method 9 Visual Determination of the Opacity of Emissions from Stationary Sources

Opacity observations were recorded to the nearest 5 percent at 15 second intervals on a field data sheet. The test was 60 minutes in duration. The highest six minute average for the test was determined.

The opacity readers were certified within the previous six months from the test date. Both the opacity field data sheets and the observer's certification are included in this report. All requirements of Method 9 were met during this test series. All information such as angles, sun location, etc. are included on the field data sheets.

4.0 Discussion of Results

Presented in this section are the results of this test series. Test results are reported in Table 4.1. Table 4.1 reports the highest 6 minute average for each test run along with an average of all the runs.
